What is Testing ?

- ▶ **Testing** means the process of checking, trying out, or evaluating a person, product, or system to find out how it works, what it knows, or if it has any faults

What is SoftWare ?

- ▶ Set of Programs to solve a purpose.
- ▶ MS Word, MS Paint, WhatsApp, Axis Mobile App.

Software is a set of **programs, instructions, and data** that tells a computer or electronic device **what to do**.

In simple words:

Software = Instructions that make hardware work.

What is SoftWare Testing ?

- ▶ SoftWare Testing is the process of verification and validation of the software to check whether it is working as per the expectations.
- ▶ **Software testing is the systematic process of evaluating and verifying that a software application functions correctly, securely, and efficiently according to its specified requirements.** Its primary goal is to identify bugs, defects, or gaps between expected and actual results before the software is released to end-users.

Purpose of SoftWare Testing ?

- ▶ The primary purpose of software testing is to **verify that a software application works correctly, meets specified requirements, and is free of critical defects before reaching the end-user**. It acts as a quality control gate that ensures reliability, security, and optimal performance.
- ▶ Positive Intention of improving the quality of the SoftWare.
 - **Bug Discovery:** Finding errors, defects, and flaws in the code during development.
 - **Requirement Validation:** Verifying that the product behaves exactly as outlined in design documents.
 - **Defect Prevention:** Learning from discovered bugs to optimize future coding processes.
 - **Quality Assurance:** Guaranteeing that the product meets both technical and UX standards

Why Software Testing is Required ?

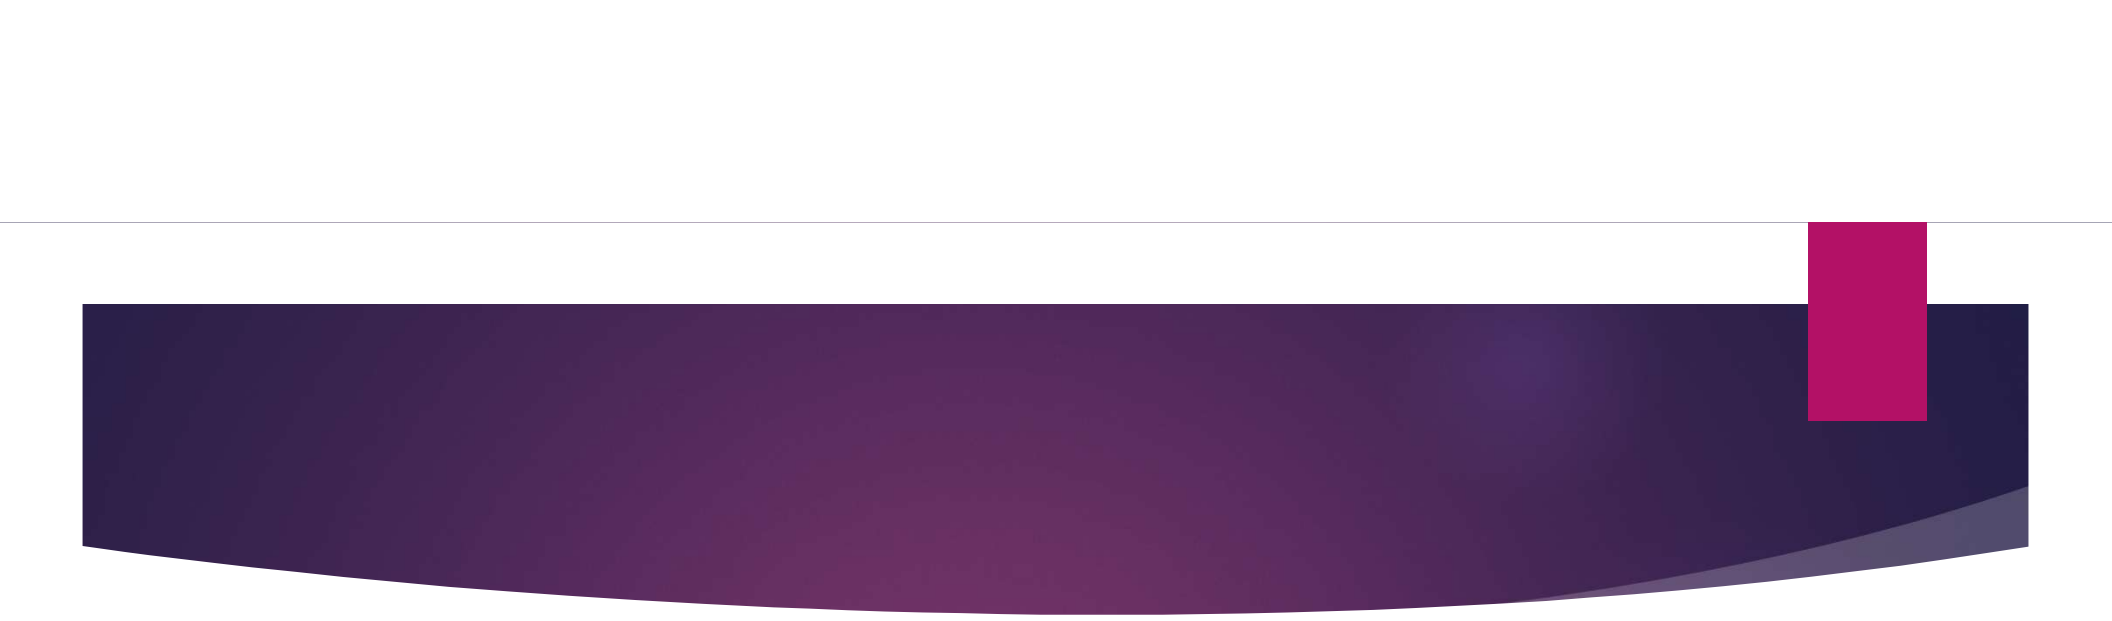

► The below are few things that will happen if you don't perform testing:

1. Buggy software with less quality may get released into the market
2. Business Reputation will be lost
3. Customer may file a case in court
4. Sales may get dropped
5. Revenue loss
6. Loss of life
7. And many more may happen.

Practicing Software Testing on this demo application

- ▶ Understanding the Application Functionality.
- ▶ Practice Creating Test Plan
- ▶ Practice Creating Test Scenarios.
- ▶ Practice Creating Test Cases
- ▶ Finding defects in this Application and reporting defects

client will be sharing the application

client want us to test

step 1 understand the application

step 2 create test plan

step 3 create Test Scenarios

step 4 create Test cases

step 5 Finding Defects and
report them

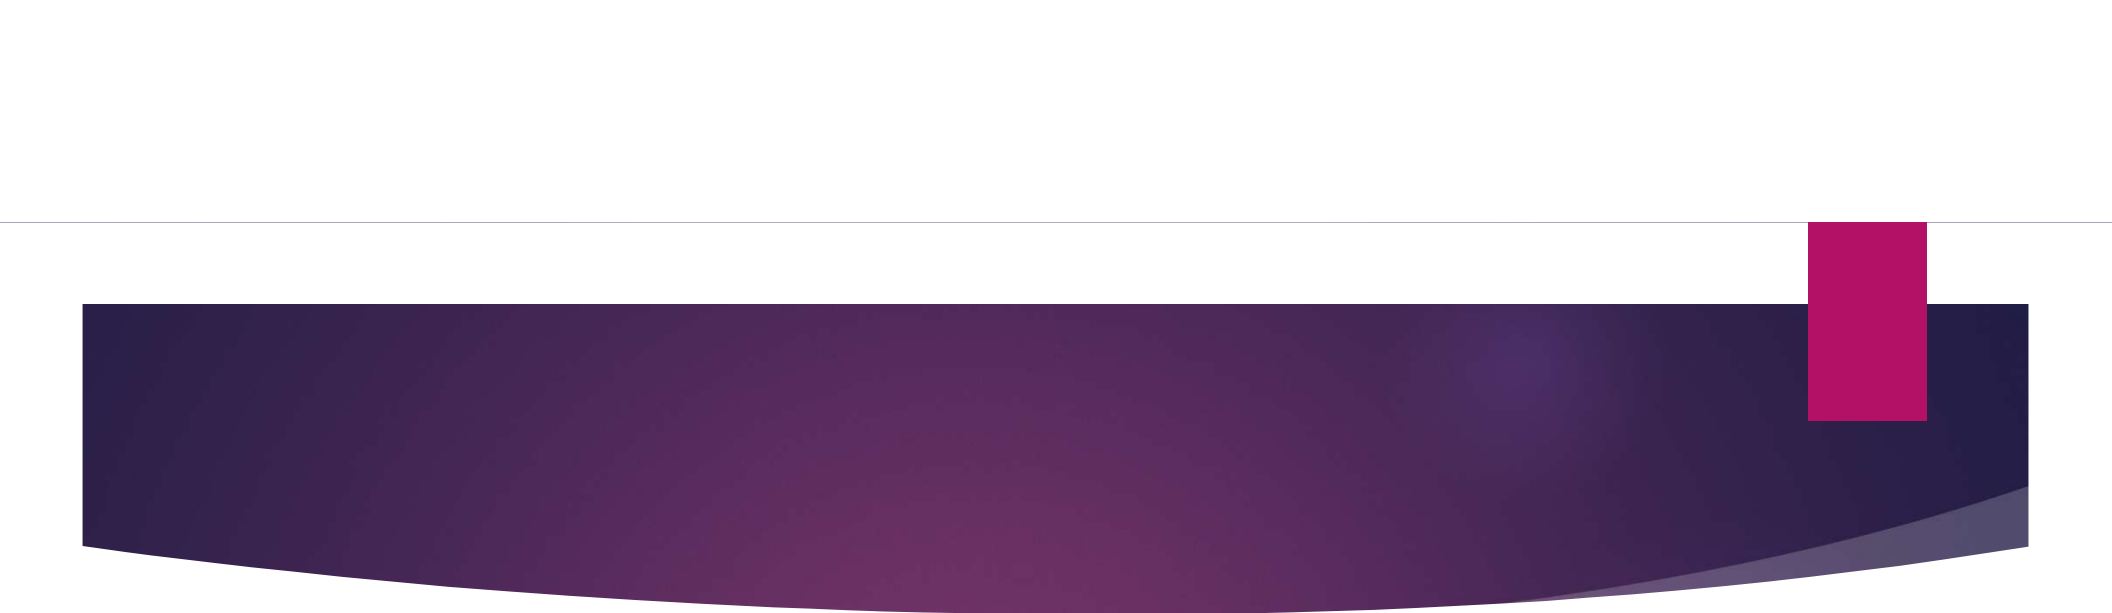

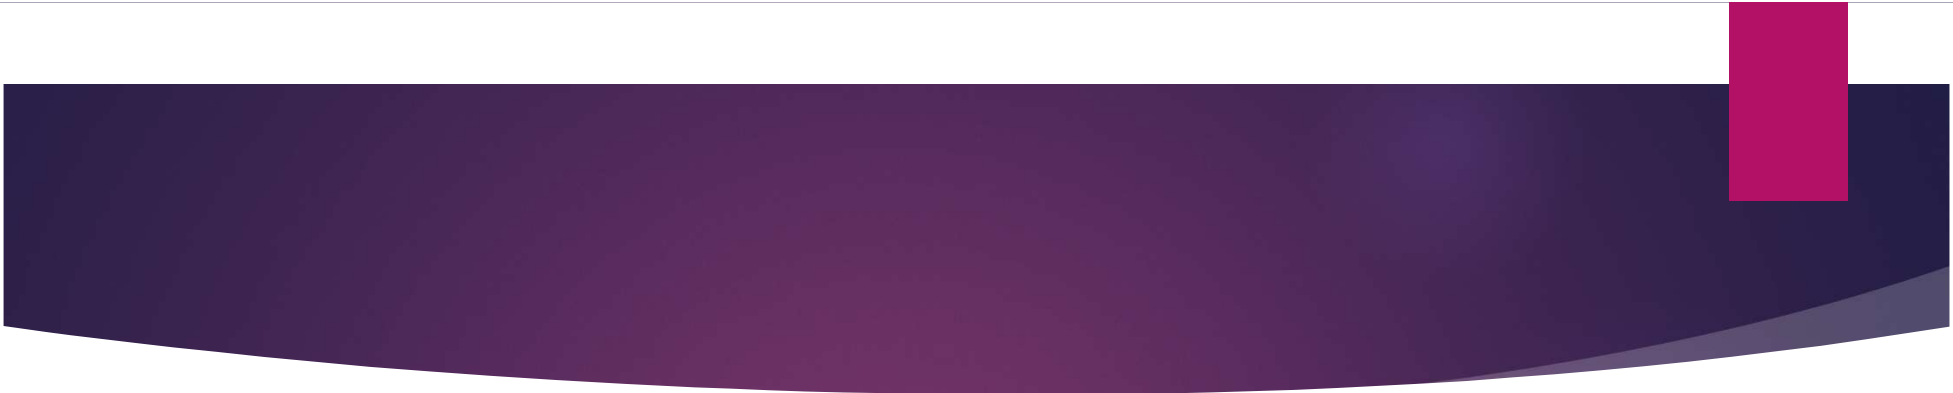

Test Artifacts

Domain knowledge plays a key role in software Testing

- ▶ As Software Testers, we need to have good domain knowledge of the Application we are testing.
- ▶ Example Application: <http://tutorialsninja.com/demo>
- ▶ What is the domain of the above example application?
- ▶ There are several domains:
 - Amazon.com - e-Commerce Domain
 - hdfcbank.com - Banking Domain

- 
- <https://www.hdfcergo.com/> - Insurance Domain
 - https://www.youtube.com/watch?v=QDnU1q64vww&feature=emb_title - Health-care Domain -
<https://www.adroitinfosystems.com/products/ehospital-systems>
 - <https://www.orangehrm.com/> - ERP Domain (Enterprise Resource Planning)
 - Google Class Room or <https://www.schoology.com/> - Education Domain
 - And there are several other domains that are not mentioned here

eCommerce - Amazon.com

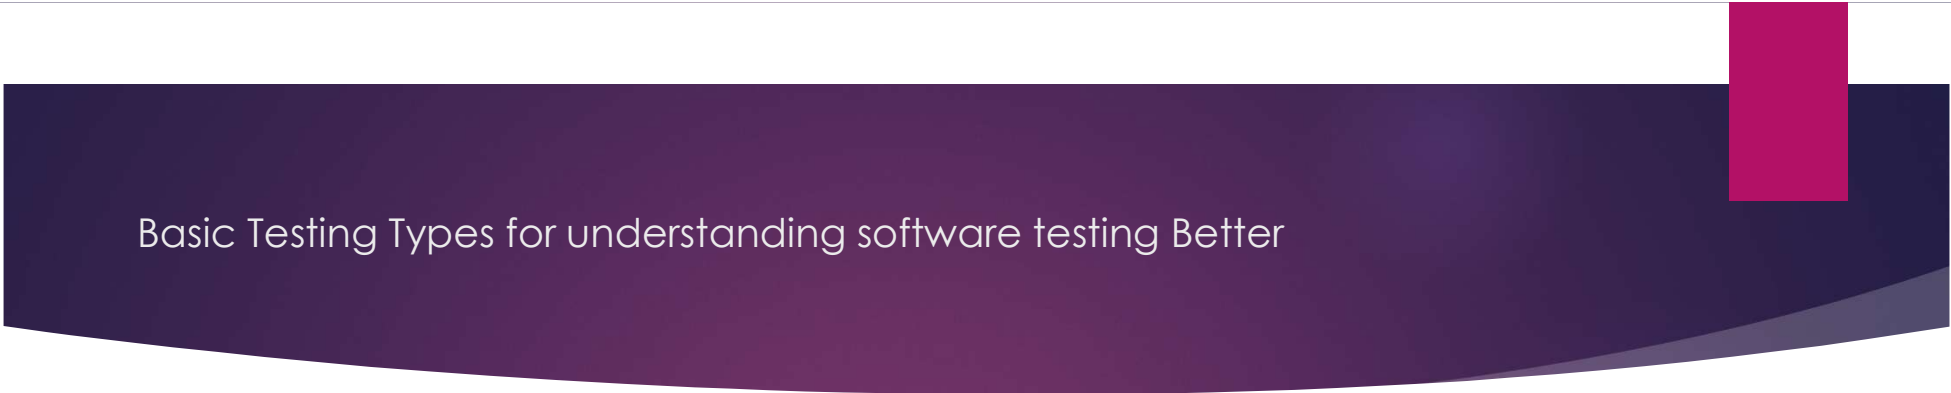

Banking - hdfcbank.com

Insurance - hdfcergo.com

Healthcare - <https://www.adroitinfosystems.com/products/ehospital-systems>

ERP Domain - orangehrm.com

Education Domain - google classrooms

Basic Testing Types for understanding software testing Better

- ▶ We need to understand the below basic Testing Types for understanding Software Testing better:
 - Manual Testing
 - Automation Testing
 - Manual Testing
 - Automation Testing
 - UI Testing
 - API Testing
 - Database Testing
